Quillix is the first distributed capture system built for the Internet.

Whether an organization has 1 or 1000 remote offices, Quillix makes capturing and accessing information as easy as browsing the web.

Production scanning? PrevaScan Enterprise feeds back-end systems the paper-based information you need.

Scan, review & release to workflow, storage or e-commerce applications.

The ActiveAgent task processing & rules server adds intelligent automation to corporate information systems.

Configurable agents for database updates, form letters-- automation has never been easier.

Extensions for the Optika® FilePower and eMedia product suites add automation & power to your Optika installation.

Check out our Optika offerings.

# ActiveAgent™ E-COMMERCE automation

features · specifications · agents

**ActiveAgent™** is an extensible, configurable add-on processing and rules server that invokes automated Agents to perform tasks on specific documents or data items, based on configurable selection criteria.

Agents can perform specialized tasks such as updating a mainframe or SQL database, sending a notification via e-mail, or generating a letter.

## Features

Flexible COM based architecture, intelligent time-weighted threshold calendars and a pre-defined software agents make it easy to put ActiveAgent eCommerce Automation to work for you.

## Specifications

Hardware and operating system requirements, available agents and system specifications.

## Case Studies & Other Resources

**Download** the [ActiveAgent White Paper](#) (171K) in Adobe® Acrobat PDF here.

**New Letter Agent!**
